Bestselling author and financial guru Harry Dent shows why we're facing a "great deflation" and what to do about it now Throughout his long career as an economic forecaster, Harry Dent has relied on a not-so-secret weapon: demographics. He can explain why our economy has risen and fallen with the peak spending of generations, and why we now face a growing demographic cliff with the accelerating retirement of the Baby Boomers around the world. Inflation rises when a larger than usual block of younger people enter the workforce, and it wanes when large numbers of older people retire, downsize their homes, and cut their spending. The mass retirement of the Boomers won't just hold back inflation; it and massive debt deleveraging will actually cause deflation. Dent explores the implications of his controversial predictions and offers advice on retirement planning, health care, real estate, education, investing, and business strategies.

"The economics of American higher education are driven by one key factor--the availability of students willing to pay tuition--and many related factors that determine what schools they attend. By digging into the data, economist Nathan Grawe has created probability models for predicting college attendance. What he sees are alarming events on the horizon that every college and university needs to understand. Overall, he spots demographic patterns that are tilting the US population toward the Hispanic southwest. Moreover, since 2007, fertility rates have fallen by 12 percent. Higher education analysts recognize the destabilizing potential of these trends. However, existing work fails to adjust headcounts for college attendance probabilities and makes no systematic attempt to distinguish demand by institution type. This book analyzes demand forecasts by institution type and rank, disaggregating by demographic groups. Its findings often contradict the dominant narrative: while many schools face painful contractions, demand for elite schools is expected to grow by 15+ percent. Geographic and racial profiles will shift only slightly--and attendance by Asians, not Hispanics, will grow most. Grawe also use the model to consider possible changes in institutional recruitment strategies and government policies. These "what if" analyses show that even aggressive innovation is unlikely to overcome trends toward larger gaps across racial, family income, and parent education groups. Aimed at administrators and trustees with responsibility for decisions ranging from admissions to student support to tenure practices to facilities construction, this book offers data to inform decision-making--decisions that will determine institutional success in meeting demographic challenges"--

Bestselling author and financial guru Harry Dent shows why we're facing a "great deflation" after five years of desperate stimulus - and what to do about it now Throughout his long career as an economic forecaster, Harry Dent has relied on a not-so-secret weapon: demographics. Studying the predictable things people do as they age is the ultimate tool for understanding trends. For instance, Dent can tell a client exactly when people will spend the most on potato chips. And he can explain why our economy has risen and fallen with the peak spending of generations, and why we now face a growing demographic cliff with the accelerating retirement of the Baby Boomers around the world. Dent predicted the impact of the Boomers hitting their highest growth in spending in the 1990s, when most economists saw the United States declining. And he anticipated the decline of Japan in the 1990s, when economists were proclaiming it would overtake the U.S. economy. But now, Dent argues, the fundamental demographics have turned against the United States and will hit more countries ahead. Inflation rises when a larger than usual block of younger people enter the workforce, and it wanes when large numbers of older people retire, downsize their homes, and cut their spending. The mass retirement of the Boomers won't just hold back inflation; it and massive debt deleveraging will actually cause deflation--weakening the economy the most from 2014 into 2019. Dent explores the implications of his controversial predictions. He offers advice on retirement planning, health care, real estate, education, investing, and business strategies. For instance . . . BUSINESSES should get lean and mean now. Identify segments that you can clearly dominate and sell off or shut down others. If you don't, the economy will do it for you, more painfully and less profitably. INVESTORS should sell stocks by mid-January 2014 and look to buy them back in 2015 or later at a Dow as low as 5,800. FAMILIES should wait to buy real estate in areas where home prices have gone back to where the bubble started in early 2000. GOVERNMENTS need to stop the endless stimulus that creates more bubbles and kills the middle class, and should assist in restructuring the unprecedented debt bubble of 1983-2008. Dent shows that if you take the time to understand demographic data, using it to your advantage isn't all that difficult. By following his suggestions, readers will be able to find the upside to the downturn and learn how to survive and prosper during the most challenging years ahead.

The Deluxe Edition of The Demographic Cliff includes over 50 minutes of exclusive video of Harry S. Dent, Jr. discussing each chapter in-depth with his trademark insight, knowledge, and passion. Bestselling author and financial guru Harry Dent shows why we're facing a decade-long "great deflation"--and what to do about it. Throughout his long career as an economic forecaster, Harry Dent has relied on demographics--the ultimate tool for predicting both big and small trends, decades in advance. Now he explains what's going to happen to our economy with the accelerating retirements of the Baby Boomers. Inflation rises when a larger than usual block of younger people enter the workforce, and it wanes when large numbers of older people retire, downsize their homes, and cut their spending. The mass retirement of the Boomers won't just hold back inflation, it will actually cause deflation--with a downturn and periodic crises from 2014 until about 2023. Dent explores the implications of his controversial predictions for retirement planning, healthcare, real estate, education, investing, and business strategies. His advice will help readers survive and prosper during the challenging years ahead.

What's more, the analysis expands to examine additional aspects of the higher education market, such as dual enrollment, transfer students, and the role of immigration in college demand.

'All bubbles collapse,' warns Harry Dent. Australia emerged remarkably unscathed from the last great global recession of 2008/09. But with heavily overvalued real estate and rapidly falling commodity and resource prices, are we heading for an economic downturn? As a leading economic forecaster, Harry Dent relies on a not-so-secret weapon: demographics. Dent can tell a client exactly when people will spend the most on a bag of chips, or a car. And he can explain why our economy has risen and fallen with the peak of spending generations, and why we now face a growing demographic cliff with the accelerating retirement of the Baby Boomers around the world. Dent offers prescient advice on retirement planning, health care, real estate, education, investing, and business strategies. He shows that if you take the time to understand demographic data, using it to your advantage isn't all that difficult. By following his suggestions, readers will be able to find the upside to the downturn and learn not only how to survive, but how to prosper during the challenging years ahead.

With costs rising, traditional college student populations shrinking, and pundits predicting that huge numbers of colleges will close in the next few decades, small colleges cannot afford to pretend that business-as-usual can sustain them. This book offers five emerging models for how small colleges can hope to survive and thrive in these very challenging times: Traditional; Integrative; Distinctive Program; Expansion, and Distributed. In addition to offering practical guidance for colleges trying to decide which model is for them, the book includes brief institutional profiles of colleges pursuing each model. The book also addresses the evolving role of consortia and partnerships as an avenue to provide additional innovative ways to manage cost and develop new opportunities and programs while maintaining fidelity to mission and strategic vision.

This book presents an ethnographic investigation of intimate and reproductive behaviour in current Japanese society, grounded in the viewpoints of a group of Japanese mothers. It adopts a new approach in studying the decreasing fertility rates which are contributing to the ageing population in modern Japan. Based on the accounts of 57 married Japanese women, it employs symbolic interactionism as a framework to examine the various factors affecting decision-making on childbirth. The influence of Assisted Reproductive Technologies (ARTs), abortion and contraception in the daily interactions and experiences of the mothers are analysed to offer a new perspective on the Japanese demographic conundrum. With strong contextual information as the foundation, the book contributes fresh insight into how Japanese women perceive the idea of childbirth in a modernized society, and also assists our understanding of the factors causing Japan's ageing population. Further, it places the mothers' experiences within current global debates to highlight the salience of the Japanese case. As the first book to provide an in-depth examination of the social process underpinning the decision to become a mother in Japan, it will appeal to students and scholars of Japanese culture and society, Gender Studies, and Sociology.

Written by contributors hailing from a variety of disciplines and viewpoints, the thirty-five essays in this anthology explore the continued inequality of the sexes in higher education and suggest changes that could make universities more family-friendly workplaces. Simultaneous.

"A book that examines the growing population of mixed minority-white backgrounds and society"--
