~~How to Read Supplement Labels Like a Pro~~

If you choose to take vitamin D supplements, 10 micrograms a day will be enough for most people. Do not take more than 100 micrograms (4,000 IU) of vitamin D a day as it could be harmful. This applies to adults, including pregnant and breastfeeding women and the elderly, and children aged 11 to 17 years.

~~Vitamins and minerals – Vitamin D – NHS~~

Use of supplements contributes substantially to total vitamin and mineral intakes at the population level. 13 Intake of vitamin B 6, thiamin, and riboflavin among US adults is at least five times higher

~~Vitamins for children—NHS~~

Vitamin D supplement. From around late March or early April until the end of September, most people can get all the vitamin D they need through sunlight on their skin and from eating a balanced diet. However, during the autumn and winter, you need to get vitamin D from your diet because the sun is not strong enough for your body to make vitamin D.

BACKGROUND: Malabsorption and deficiency of fat-soluble vitamins K may occur in cystic fibrosis, a genetic disorder affecting multiple organs. Vitamin K is known to play an important role in both blood coagulation and bone formation, hence the role of supplementation of vitamin K in this category needs to be reviewed. This is an updated version of the review.
