In the checklist below, based on our long term experience in providing twin screw extruders for a wide range of applications, here is a checklist of the main processing advantages of the Cleextral twin screw extrusion technology. Co-rotating twin screw extruders versus single screw extruders show : Remarkable mixing capability, due to the interpenetration of the screws and the broad diversity of specialized screw designs (such as reverse screw elements, kneading blocks, gear mixing elements, etc.

Benefits of twin screw extrusion | Cleextral

While both single screw and twin-screw extruders are used in the food industry, twin-screw extruders offer better control, flexibility, and accuracy. Extrusion is one of the most energy efficient cooking processes.

TwinScrewExtrusion - Twin-screw extrusion

Twin-screw extruders have historically been used to produce pellets to enable consistent feeding into a secondary processing device, such as an injection molding machine or single-screw extruder. There is also a fast growing trend to bypass the pelletizing step and to produce a film, fiber, sheet, or profile from the twin-screw extruder.

The corotating intermeshing twin-screw extruder is the most prevalent compounding system in the world today to mix polymers with fillers, fibers, and additives. The TSE is a high-speed mixer with tight geometric tolerances for screws and barrels.

How and Where Twin-Screw Extruders Fit in Recycling ...

Doboczky also argued that the output of a twin screw extruder is about three times as high as that of a single screw extruder of a similar size and screw speed. A second study (1971) of the pumping characteristics of polymer melts was reported by Menges and Klenk [11–13] using polyvinyl chloride in a Schloemann AG Pasquetti Bitruder.

Shortly after, Roberto Colombo of LMP developed the first twin screw extruders in Italy. Process. In the extrusion of plastics, the raw compound material is commonly in the form of nurdles (small beads, often called resin) that are gravity fed from a top mounted hopper into the barrel of the extruder. Additives such as colorants and UV inhibitors (in either liquid or pellet form) are often used and can be mixed into the resin prior to arriving at the hopper.

Machines with twin-screw extruder technology provide accurate control of temperature profiles, higher convective heat transfer, and narrower residence time distribution; hence, they offer better control of process parameters. Moreover, the lower dispersion of shear rates and strain helps to effectively control shear-time-temperature.

Why We Swear By the Twin-Screw Extruder Technology - CFAM

At the headquarters in Nuremberg/Germany, we conceive, design and produce individually laid out, co-rotating twin screw extruders and turn-key extrusion lines for the plastics and pharmaceutical industry. This, in combination with sophisticated process technology know-how, guarantees the high quality of our extruder lines.
